DeepMorph AI Genomic Analysis Report

Generated on 2026-03-07 10:06 | System Version: DeepMorph v2.0

PATIENT INFORMATION

Patient ID	P-230BE44F
Name	fazil
Age	22
Gender	Male
Date of Analysis	2026-03-07 10:06

MUTATION ANALYSIS

Mutation Status: **Mutated**
Confidence Score: 77.5%
Mutation Hotspot Location: Position 73 (A → A)

CLINICAL INTERPRETATION

Clinical Significance: **Pathogenic**
Clinical Confidence: 69.78%
Risk Level: **High**

GENETIC PREDICTION

Predicted Gene: **DMD**
Gene Confidence: 97.75%

DISEASE INTELLIGENCE

Disease Name: **Duchenne Muscular Dystrophy**
Duchenne Muscular Dystrophy is a severe X-linked genetic disorder caused by mutations in the dystrophin gene. The absence of dystrophin leads to progressive degeneration of skeletal and cardiac muscles.

Symptoms:

- Progressive muscle weakness
- Difficulty walking
- Frequent falls
- Enlarged calf muscles

Treatment Options:

- Corticosteroid Therapy: Helps slow muscle degeneration and maintain mobility.
- Gene Therapy: Experimental treatments aim to restore dystrophin production.

Surgical Procedures:

- Spinal Surgery: Corrects scoliosis caused by muscle weakness.
- Cardiac Device Implantation: Pacemakers may help manage heart complications.

Global Death Rate: Reduced life expectancy without treatment
Annual Global Deaths: Thousands of deaths globally due to respiratory or cardiac complications
