DeepMorph AI Genomic Analysis Report

Generated on 2026-03-06 23:17 | System Version: DeepMorph v2.0

PATIENT INFORMATION

Patient ID	P-3C97EE4E
Name	fazil
Age	60
Gender	Male
Date of Analysis	2026-03-06 23:17

MUTATION ANALYSIS

Mutation Status: **Mutated**
Confidence Score: 82.06%
Mutation Hotspot Location: Position 87 (A → A)

CLINICAL INTERPRETATION

Clinical Significance: **Pathogenic**
Clinical Confidence: 66.46%
Risk Level: **High**

GENETIC PREDICTION

Predicted Gene: **FBN1**
Gene Confidence: 98.27%

DISEASE INTELLIGENCE

Disease Name: **Marfan Syndrome**
Marfan Syndrome is a connective tissue disorder caused by mutations in the FBN1 gene. It affects the heart, blood vessels, skeleton, and eyes, with the most serious complications involving the aorta.

Symptoms:

- Tall and slender body
- Long limbs and fingers
- Heart murmurs
- Vision problems

Treatment Options:

- Beta Blockers: Reduce stress on the aorta and slow enlargement of blood vessels.
- Angiotensin Receptor Blockers: Help control blood pressure and reduce cardiovascular complications.

Surgical Procedures:

- Aortic Root Replacement: Replaces weakened portions of the aorta to prevent rupture.

Global Death Rate: Rare disease affecting about 1 in 5000 people
Annual Global Deaths: Deaths primarily due to untreated aortic rupture
