

DeepMorph Clinical Analysis Report

SECTION 1 – Mutation Analysis

Mutation Status: Mutated
Mutation Confidence: 95.71%

SECTION 2 – Clinical Interpretation

Clinical Significance: Likely pathogenic
Risk Level: Moderate
Clinical Confidence: 59.21%

SECTION 3 – Genetic Prediction

Predicted Gene: TTN
Gene Confidence: 65.77%

SECTION 4 – Disease Information

Disease Name: Dilated Cardiomyopathy

Dilated cardiomyopathy (DCM) is a cardiac disorder characterized by enlargement and weakening of the heart's ventricles, leading to reduced pumping efficiency and progressive heart failure. It may result from inherited structural protein abnormalities affecting myocardial contractility.

Symptoms:

- Shortness of breath during exertion
- Fatigue
- Swelling in legs or ankles
- Palpitations or irregular heartbeat
