

DeepMorph AI Genomic Analysis Report

Generated on 2026-04-24 22:39 | System Version: DeepMorph v2.0

PATIENT INFORMATION

Patient ID	P-112A1D03
Name	fazil
Age	22
Gender	Female
Date of Analysis	2026-04-24 22:39

MUTATION ANALYSIS

Mutation Status: **Mutated**
Confidence Score: 93.39%
Mutation Hotspot Location: Position 23 (A → C)

CLINICAL INTERPRETATION

Clinical Significance: **Pathogenic**
Clinical Confidence: 77.43%
Risk Level: **High**

GENETIC PREDICTION

Predicted Gene: **DNAH5**
Gene Confidence: 99.84%

DISEASE INTELLIGENCE

Disease Name: **Primary Ciliary Dyskinesia**
Primary Ciliary Dyskinesia is a genetic disorder affecting the function of cilia lining the respiratory tract. Impaired ciliary movement leads to chronic respiratory infections and impaired mucus clearance.

Symptoms:

- Chronic cough
- Frequent respiratory infections
- Sinusitis
- Reduced lung function

Treatment Options:

- Airway Clearance Therapy: Techniques to remove mucus from the lungs.
- Antibiotic Therapy: Used to control recurrent respiratory infections.

Surgical Procedures:

- Lung Transplant: Performed in severe cases of advanced lung damage.

Global Death Rate: Low mortality with proper treatment

Annual Global Deaths: Rare disease with limited global mortality data
